

Model : BR500 series

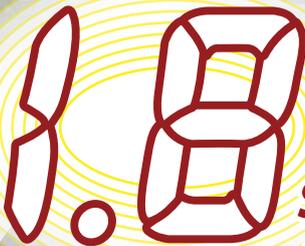

# INTELLI BARRIER

INTELLIGENT VEHICLE BARRIER GATE

New Product  
Launching !

**Latest Generation**

**second  
opening / closing  
speed**

### Faster is Better

Faster opening and closing allow more car to pass through. This reduces congestion during peak hour.

### Same price as 3 sec barrier

Why still choose older generation design 4, 3 or 2.5 sec ? Given the same price with better performance, 1.8 sec BR518 is a clear choice winner.

**BR518**

## Why choose MAG?

### Full spare parts locally

No more waiting 1 or 2 months to import parts from oversea. All original spare parts are available from us locally that can make your barrier gate up and running in shortest time possible.

### Complete solution

MAG offer complete parking access system with long range reader, access controller, software and accessories. So you will get complete technical support, service, warranty, consultation, purchase and shipping from a single contact point. No more headache of calling multiple vendors for troubleshooting.

### Continuous improvement

MAG is expert in barrier gate. Beware of imitator that claimed their motor works as good as ours or sprayed same color with us. We are continuously improving our products to give customer better performance, better warranty and better value. MAG is definitely your long term partner in parking barrier gate system.

MAG is better by design

## What is NLS ?

Common failure of most barrier gate is limit switch. Limit switch is used to determine opening and closing position of arm. The more you use, the faster it will fail. This requires constant maintenance. MAG innovative NLS design - does not use limit switch. MAG uses smart encoder built into motor. Electronic encoder is more accurate and not subject to mechanical wear & tear, therefore MAG can work better and work harder for you.

### Innovative features

NLS system and European lever design ensure arm movement is accurate, swift and smooth with minimal maintenance.

In case of power failure, the clutch can be released from the outside without opening the entire housing. This is to avoid the internal engine from being tampered.

The arm automatically swings out or auto-reverses when it hits a vehicle to minimize damage. Optional rubber lining or photobeam can be added to further enhance the safety level.

### Proven customer satisfaction
